

A Division of Trilobite Testing, Inc.
1-877-MUD-HAWK

- **Monster Pump** was established in 2006 with a goal of effectively moving mud and cuttings from steel-pits to haul-off pits in sensitive ground-water areas where trash pumps have failed.
- **Monster Pump** provides an “on site” pump operator, which eliminates the need to rely on rig hands to run the pump.
- **Monster Pump** provides “one call” service for poly pipe and mud pumping reducing the tool pushers work load.
- **Monster Pump** reduces the risk of weather related issues because the operator stays on location or is available 24 hours a day by phone.
- **Monster Pump** has 8000’ of 3” poly pipe available for rental for any fluid transportation needs including water lines.
- **Monster Pumps** 200 HP Diesel engine gives it 4 times the power of most trash pumps currently being used in oilfield applications.
- **Monster Pump** can pump solids as big as 3” and has a max pumping ability of 1000 GPM, also it is capable of pumping mud 1 ½ miles with a 50’ rise.
